Software Engineering Projects

Additional information and projects can be found on <https://yuehwhan.com>

Programming Blog

- Designed a blog platform with Python to share experiences regarding software engineering and algorithms, features for this app include user authentication, registration, and profile customization
- Launched this app using the Django framework, AWS S3 for file storage, and deployed onto Heroku services

Photo/Location Sharing App

- Developed a modern web application with Javascript to share photos, incorporating tools such as user authentication, image upload, REST API, and input validation
- Utilized knowledge in full stack web development (MERN), Javascript, React, MongoDB, Express.js, Node.js, Google Maps API, and Git to create and deploy this application

Python Scripts: Server Monitor & Web Scraper

- Created a python script to monitor a linode server, alerting the user via email when server stops or crashes
- Implemented a web scraper to monitor ebay items, alerting the user via email when the the price changes

Python GUI: App Opener

- Utilized the Python tkinter library to create a GUI that can open applications in the operating system
- Generated a text file to store all of the applications that need to be opened for the next session

Professional Experience

SHI International Corp.

Strategic Sales Account Manager

Somerset, NJ

March 2019 — Current

- Researched over 80 software companies by discussing with software sales specialists and DevOps engineers to provide the best software option for Verizon clients
- Prevented the loss of a \$2 million Verizon account by personally undertaking all responsibilities and reformed the relationship with previously dissatisfied Verizon clients
- Identified sales opportunities and contributed to an increase of GM growth by 17% from the previous year
